

NUTRITION PLAN – TEMPLATE FOR EVERY OBJECTIVE

THE TEMPLATE FOR CREATING YOUR OWN NUTRITION PLAN

CREATE A NUTRITION PLAN USING THE TEMPLATE

The goal:

Was the total calorie count too high to lose weight? Did you consume too little protein during a caloric deficit? Your nutrition plan will tell you. It gives you control over every step of your journey to your desired physical target, allowing you to make simple adjustments along the way. The template allows you to determine not only the total calorie count, but also the ratio of proteins, carbohydrates and fats in every meal. That makes it easy to log each individual meal of the day exactly.

In addition to exercise, nutrition is the key to physical fitness and long-term success in training. That is why it is very useful to keep an eye on your diet at all times. Only a proper nutrition plan will allow you to perfectly customise your diet to match your physical objectives. A detailed log of everything you eat helps you to quickly identify any deficits in your diet that could prevent you from achieving your physical target. Slight adjustments are then quick and easy to implement.

How it works:

Just add the full meals and drinks of the day in the space provided in the nutrition plan template. It is important to accurately weigh and log the meals, including the total number of calories and the macro nutrient ratio of proteins, carbohydrates and fats. There are a number of nutritional databases and apps that can help you with that.

At the end of each day you will then be able to check if you have achieved your calorie and nutrient goal, provided you have noted down everything correctly.

We wish you every success with your nutrition plan and are happy to answer any questions you may have.
